Aqsa Shakoor

AI Engineer | AI Automation & LLM Applications | RAG, AI Agents & Backend Engineering

aqsashakoor21@gmail.com | +92 311 7145120 | linkedin.com/in/aqsa-shakoor-523041216 | github.com/aqsdev

PROFESSIONAL SUMMARY

AI Engineer and Full-Stack Developer with 4+ years of software development experience building AI-powered applications, intelligent automation systems and enterprise software for European clients. Specialized in LLM-integrated applications, conversational AI, RAG-based document retrieval, AI agents and end-to-end automation workflows, built with Python (FastAPI), React, n8n, PHP and Node.js.

Strong background in backend architecture, API development and enterprise integrations, with production systems delivered for clients across Europe. Contributed to enterprise platforms serving 100,000+ users and automated document-processing workflows handling 1,000+ documents. Works across OpenAI, Claude, Gemini and open-source models, and turns business requirements into scalable, maintainable AI-driven solutions.

TECHNICAL SKILLS

AI Engineering & Intelligent Systems: Large Language Models (LLMs), AI Agents, Retrieval-Augmented Generation (RAG), Conversational AI, Prompt Engineering, Multi-Model LLM Integration (OpenAI, Anthropic Claude, Google Gemini), OpenRouter, Hugging Face, Embeddings, Image Generation Models

AI Automation & Workflow Orchestration: n8n, Workflow Automation, Business Process Automation, API Integration, Webhooks, Browser Automation (Playwright, Selenium), ManyChat

Programming Languages: Python, PHP, JavaScript, TypeScript, SQL

Backend Engineering & APIs: FastAPI, Django, Flask, Node.js, RESTful API Development, Backend Architecture, Asynchronous Processing (asyncio), System Integration

Frontend Engineering: React.js, HTML5, CSS3, Responsive Web Development

CMS & Enterprise Platforms: TYPO3 (Extbase, Fluid), WordPress, Joomla, Custom Plugin & Extension Development

Databases & Storage: MySQL, PostgreSQL, Redis, SQLite, Supabase, Vector Databases

Cloud, DevOps & Infrastructure: Microsoft Azure, Docker, Kubernetes, CI/CD (GitHub Actions, GitLab CI), Infrastructure as Code, Vercel, DigitalOcean, ISPConfig, Linux Server Administration

Enterprise Integrations & Development Tools: Microsoft Graph API, Microsoft Entra ID, SSO, pytest, Git, GitHub, GitLab, Cursor, Jira, Slack, Agile/Scrum, Code Reviews

PROFESSIONAL EXPERIENCE

Freelance AI & Backend Developer

Mar 2026 – Present

Self-Employed | Remote

- Develop AI-powered applications, intelligent automation systems and custom backend solutions, translating client requirements into practical, production-ready software architecture.
- Built a configurable Python conversational AI engine combining LLM APIs, intent detection, structured conversation flows, YAML-driven playbooks and automated response handling.
- Integrated OpenAI-compatible LLM services (OpenAI, Claude, Gemini) through API gateways such as OpenRouter and NanoGPT, implementing context-aware prompting and stage-based conversations.
- Build FastAPI backends and React frontends for client AI applications, with pytest test suites and deployments on Vercel.
- Developed Playwright and Selenium browser automation that removes repetitive web interactions from client operations.
- Implement custom backend services and API integrations in Python, PHP and Node.js, connecting AI capabilities to existing applications and external platforms.

Backend & AI Automation Developer

Mar 2023 – Feb 2026

Gosign GmbH | Germany (Remote)

- Engineered and maintained enterprise software for European clients on platforms serving 100,000+ users.
- Delivered complex backend applications and enterprise integrations across the full lifecycle — requirements analysis, solution design, implementation, deployment and ongoing maintenance.
- Engineered AI-powered document-processing workflows handling 1,000+ documents, automating PDF extraction, sensitive-data and signature redaction, merging, secure storage, TYPO3 API integration and automated communication.
- Contributed to an internal enterprise AI platform with a React frontend, featuring multi-model LLM integration, collaborative chat, AI text and image generation, and RAG-based document search and Q&A.
- Architected custom TYPO3 extensions in PHP, Extbase and Fluid, delivering tailored enterprise features, REST API integrations and GDPR-aligned, privacy-focused document handling.
- Implemented Microsoft Entra ID and Microsoft Graph API integrations, enabling single sign-on (SSO) and secure access to organizational resources across Microsoft 365 and Azure.

- Collaborated with distributed engineering teams through code reviews, Docker-based environments and CI/CD pipelines (GitLab CI, GitHub Actions) for reliable deployments and continuous improvement.

WordPress Developer Intern Jun 2022 – Sep 2022

Yellow Sols

- Developed and customized WordPress themes and plugins in PHP, delivering tailored functionality for each client.
- Built responsive, SEO-friendly interfaces with HTML, CSS, Bootstrap and JavaScript.
- Handled debugging, customization and cross-browser compatibility improvements across client websites.

PROFESSIONAL PROJECTS

AI Document Redaction Pipeline — Email-to-TYPO3 Automation (Gosign GmbH)

- Built an event-driven n8n workflow that monitors incoming email, extracts PDF attachments and orchestrates multiple document-processing services end to end.
- Combined configurable blocklist/allowlist rules with an AI model to redact sensitive terms while preserving protected ones, alongside a separate signature-detection and redaction service.
- Automated PDF merging, storage through the TYPO3 API, generation of public or protected file links, and email delivery of processed documents back to the sender.

Technology stack: n8n, TYPO3 REST API, AI model integration, PDF processing, Email Automation

Config-Driven Conversational AI Engine — ManyChat Chatbot (Freelance)

- Developed an asynchronous Python conversational engine for a ManyChat client chatbot, supporting intent detection, structured playbooks and stage-based orchestration.
- Designed YAML-driven conversation flows so stages, playbooks and logic change without code changes.
- Integrated OpenAI-compatible LLM APIs via the NanoGPT gateway with stage-specific, context-aware prompts.
- Implemented Redis-backed persistent job queues and aiosqlite storage for non-blocking message processing and conversation-state persistence.

Technology stack: Python, asyncio, Redis, SQLite, aiosqlite, PyYAML, ManyChat, LLM APIs, NanoGPT Gateway

Internal ChatGPT-Style AI Platform — Enterprise Chat with RAG (Gosign GmbH)

- Contributed to an internal enterprise AI platform with a React conversational interface, collaborative group chats and multi-model text and image generation.
- Implemented RAG-based document Q&A — ingestion, chunking, embedding generation and Supabase vector storage — so users can retrieve answers from organizational documents.
- Integrated enterprise authentication through Microsoft Entra ID and Microsoft Graph API for secure document access within Microsoft 365.

Technology stack: React, LLM APIs, Embedding Models, RAG, Supabase Vector Storage, Microsoft Entra ID, Microsoft Graph API

Twitter/X Reply Automation Bot — Browser-Based Automation (Freelance)

- Developed a Playwright and Selenium automation bot that drives Twitter/X through browser workflows to automate repetitive reply operations.

Technology stack: Playwright, Selenium, Browser Automation

TYPO3 Extension Development — Enterprise Applications for European Clients (Gosign GmbH)

- Designed and developed custom TYPO3 extensions in PHP, Extbase and Fluid, implementing backend business logic and tailored enterprise functionality.
- Built REST API integrations connecting TYPO3 with external systems and third-party services.
- Optimized MySQL queries and backend code to improve application performance and maintainability.

Technology stack: PHP, TYPO3, Extbase, Fluid, MySQL, REST APIs, Docker, Git, GitLab CI

Custom WordPress Themes & Plugins — Yellow Sols

- Developed and customized WordPress themes and plugins in PHP with client-specific functionality and features.
- Built responsive, SEO-friendly interfaces with HTML, CSS, Bootstrap and JavaScript.

Technology stack: PHP, WordPress, HTML, CSS, Bootstrap, JavaScript

EDUCATION

Bachelor of Science in Computer Science
University of Sargodha | 2019 – 2023
