Aqsa Shakoor

AI Engineer | AI Automation & LLM Applications | RAG, AI Agents & Backend Engineering

aqsashakoor21@gmail.com | +92 311 7145120 | linkedin.com/in/aqsa-shakoor-523041216 | github.com/aqsdev

PROFESSIONAL SUMMARY

AI Engineer and Full-Stack Developer with 4+ years of software development experience building AI-powered applications, intelligent automation systems, and enterprise software solutions. Experienced in developing LLM-integrated applications, conversational AI systems, RAG-based document retrieval, AI agents, and end-to-end automation workflows using Python, n8n, PHP, and Node.js.

Strong background in backend architecture, API development, enterprise integrations, and custom software engineering, with experience delivering production systems for international clients. Contributed to enterprise platforms supporting over 100,000 users across Europe and automated document-processing workflows designed to handle 1,000+ documents. Skilled at translating business requirements into scalable, maintainable, and practical AI-driven solutions.

TECHNICAL SKILLS

AI Engineering & Intelligent Systems: Large Language Models (LLMs), AI Agents, Retrieval-Augmented Generation (RAG), Conversational AI, Prompt Engineering, OpenAI APIs, Multi-Model LLM Integration, Embeddings, AI-Powered Applications, Image Generation Models.
AI Automation & Workflow Orchestration: n8n, Workflow Automation, Business Process Automation, API Integration, Webhooks, Browser Automation, Playwright, Selenium, ManyChat.
Programming Languages: Python, PHP, JavaScript, TypeScript, SQL.
Backend Engineering & APIs: Node.js, RESTful API Development, Backend Architecture, Asynchronous Processing, System Integration, Custom API Development.
Frontend Engineering: React.js, HTML5, CSS3, Responsive Web Development.
CMS & Enterprise Platforms: TYPO3, WordPress, Joomla, Custom Plugin Development, TYPO3 Extension Development.
Databases & Storage: MySQL, PostgreSQL, Redis, SQLite, Supabase, Vector Databases.
Cloud, DevOps & Infrastructure: Docker, DigitalOcean, Linux Server Administration, CI/CD.
Enterprise Integrations & Development Tools: Microsoft Graph API, Microsoft Entra ID, SSO, Git, GitHub, GitLab, Jira, Slack, Agile/Scrum, Code Reviews.

PROFESSIONAL EXPERIENCE

Freelance AI & Backend Developer | Mar 2026 – Present
Self-Employed | Remote

- Develop AI-powered applications, intelligent automation systems, and custom backend solutions, translating business requirements into practical software architectures and production-oriented implementations.
- Built a configurable Python-based conversational AI engine integrating LLM APIs, intent detection, structured conversation flows, YAML-driven playbooks, and automated response handling.
- Integrated OpenAI-compatible LLM services through API gateways, implementing context-aware prompting and stage-based conversational experiences for client applications.
- Developed browser automation solutions using Playwright and Selenium to automate repetitive web interactions and operational processes.
- Implement custom backend services and API integrations using Python, PHP, and Node.js, connecting AI capabilities with existing applications and external platforms.

Backend & AI Automation Developer | Mar 2023 – Feb 2026
Gosign GmbH | Germany (Remote)

- Engineered and maintained enterprise software solutions for European clients, contributing to digital platforms and business systems supporting a user base of 100,000+ across Europe.
- Developed and maintained complex backend applications and enterprise integrations, contributing across the software development lifecycle from requirements analysis and solution design to implementation, deployment, and ongoing maintenance.
- Engineered AI-powered document-processing and business automation workflows designed to handle 1,000+ documents, automating PDF extraction, sensitive-data and signature redaction, document merging, secure storage, TYPO3 API integration, and automated communication.
- Developed custom TYPO3 extensions and privacy-focused enterprise functionality supporting GDPR-related data protection requirements, secure document handling, and privacy-conscious business operations.
- Contributed to an internal enterprise AI platform featuring multi-model LLM integration, collaborative chat environments, AI-powered text and image generation, and Retrieval-Augmented Generation (RAG) for document search and question answering.
- Implemented enterprise integrations with Microsoft Entra ID and Microsoft Graph API, enabling single sign-on (SSO) and secure access to organizational resources within Microsoft 365 environments.
- Architected and developed custom TYPO3 extensions and backend functionality using PHP, Extbase, and Fluid, delivering tailored enterprise features and REST API integrations for international client projects.
- Collaborated with distributed engineering teams using Docker, GitHub, GitLab, code reviews, and CI/CD workflows to support collaborative development, deployment processes, and continuous system improvements.

WordPress Developer Intern | Jun 2022 – Sep 2022
Yellow Sols
- Developed and customized WordPress themes and plugins using PHP, delivering tailored website functionality based on client and project requirements.
- Built responsive, SEO-friendly website interfaces using HTML, CSS, Bootstrap, and JavaScript.
- Supported website development, customization, debugging, and cross-browser compatibility improvements.

PROFESSIONAL PROJECTS

AI Document Redaction Pipeline — Email-to-TYPO3 Automation (Gosign GmbH)
- Developed an event-driven n8n workflow that monitors incoming emails, extracts PDF attachments, and orchestrates multiple document-processing services to automate the document-handling pipeline.
- Implemented configurable blocklist and allowlist rules alongside an AI model to identify and redact sensitive terms while preserving protected terms. Integrated a separate signature-detection and redaction service.
- Automated PDF merging, final document storage through the TYPO3 API, generation of public or protected file links, and email delivery of processed documents to the original sender.
  Technology stack: n8n, TYPO3 REST API, AI model integration, PDF processing, Email Automation.

Config-Driven Conversational AI Engine — ManyChat Chatbot (Freelance)
- Developed an asynchronous Python-based conversational engine for a client chatbot integrated with ManyChat, supporting intent detection, structured playbooks, and stage-based conversation orchestration.
- Implemented YAML-driven conversation flows, allowing chatbot stages, playbooks, and conversation logic to be modified without changing the underlying application code.
- Integrated OpenAI-compatible LLM APIs through the NanoGPT gateway and developed stage-specific prompts to support context-aware conversational responses.
- Implemented Redis-backed persistent job queues and SQLite-based storage using aiosqlite to support non-blocking message processing and conversation-state persistence.
  Technology stack: Python, asyncio, Redis, SQLite, aiosqlite, PyYAML, ManyChat, LLM APIs, NanoGPT Gateway.

Internal ChatGPT-Style AI Platform — Enterprise Chat with RAG (Gosign GmbH)
- Contributed to the development of an internal enterprise AI platform featuring a conversational interface, collaborative group chats, and multi-model text and image generation.
- Implemented and supported RAG-based document question-answering capabilities, including document ingestion, chunking, embedding generation, and vector storage using Supabase, enabling users to retrieve relevant information from organizational documents.
- Integrated enterprise authentication through Microsoft Entra ID and Microsoft Graph API, supporting secure organizational access and document interactions within the Microsoft 365 environment.
  Technology stack: LLM APIs, Embedding Models, RAG, Supabase Vector Storage, Microsoft Entra ID, Microsoft Graph API.

Twitter/X Reply Automation Bot — Browser-Based Automation (Freelance)
- Developed a browser automation bot using Playwright and Selenium to interact with Twitter/X through browser-driven workflows and automate repetitive reply-related operations.
  Technology stack: Playwright, Selenium, Browser Automation.

TYPO3 Extension Development — Enterprise Applications for European Clients (Gosign GmbH)
- Designed and developed custom TYPO3 extensions using PHP, Extbase, and Fluid, implementing backend business logic and tailored functionality for enterprise applications.
- Built REST API integrations between TYPO3 and external systems, connecting enterprise platforms and third-party services.
- Optimized MySQL queries and backend functionality to improve application performance and maintainability.
  Technology stack: PHP, TYPO3, Extbase, Fluid, MySQL, REST APIs, Docker, Git, GitLab CI.

Custom WordPress Themes & Plugins (Yellow Sols)
- Developed and customized WordPress themes and plugins using PHP, implementing client-specific functionality and website features.
- Built responsive and SEO-friendly website interfaces using HTML, CSS, Bootstrap, and JavaScript.
  Technology stack: PHP, WordPress, HTML, CSS, Bootstrap, JavaScript.

EDUCATION

Bachelor of Science in Computer Science
University of Sargodha | 2019–2023
